(54) MESSAGE TRANSMISSION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a message transmission system which can easily transmit an identical message to plural mobile terminals and can arbitrarily specify the mobile terminal of a multi-address object.

SOLUTION: Common group identifiers are imparted to plural mobile terminals and correspondence relationships between these group identifiers and calling numbers of the plural mobile terminals belonging to the former are stored as member tables by each of mobile terminals 1a, 1b, 1c, 1d and 1e. Thus, when an arbitrary mobile

terminal 1a, 1b, 1c, 1d or 1e receives a multi-address message accompanied by this group identifier, this member table is referred to on the basis of the group identifier, a multi-address message 101 is transmitted to a next transmission destination, and the mobile terminal 1a, 1b, 1c, 1d or 1e which receives the multi-address message 101 transmits the multi-address message 101 accompanied by this group identifier one after another.
